

PbI₂_SS

LBE-I_SS_II

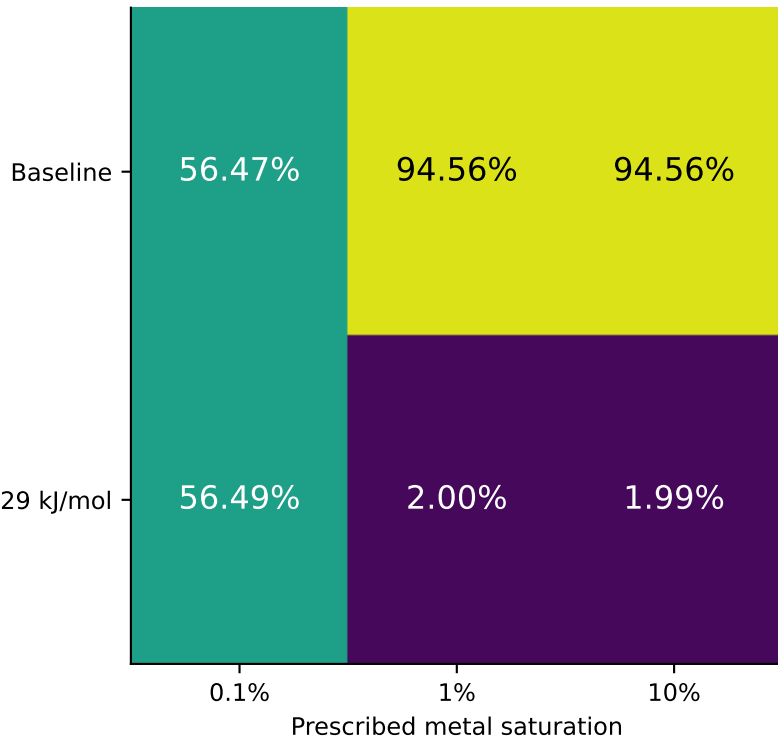

LBE-I_SiO₂_I

Thermodynamic and source sensitivity; +29 kJ/mol is a surrogate

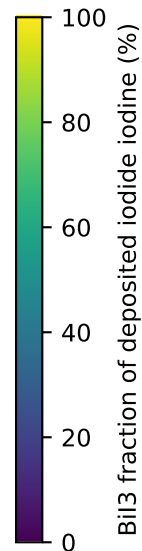

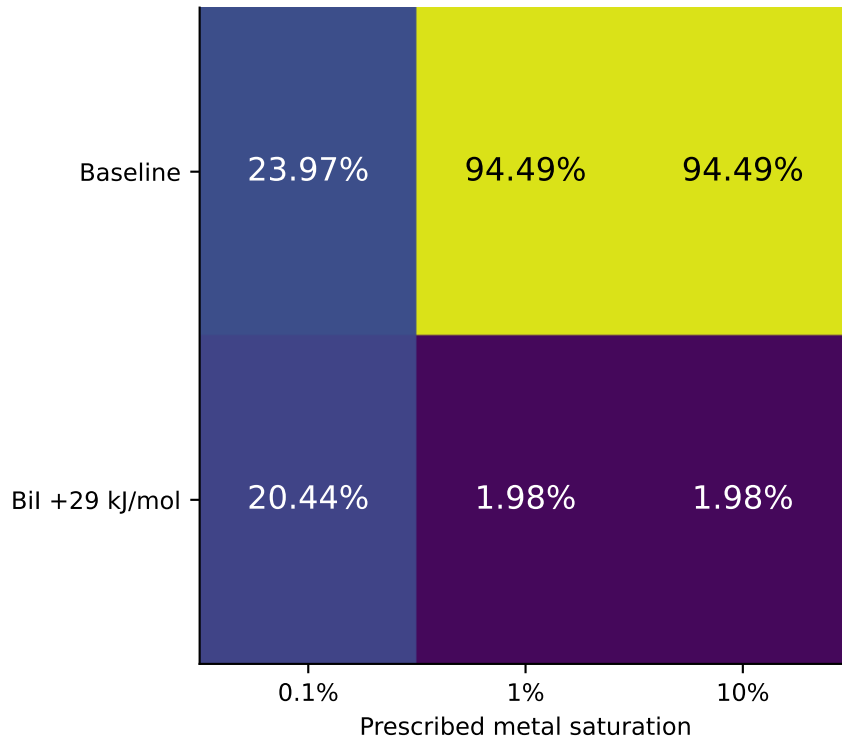

LBE-I_SS_II

Published iodide-only Bil3 share: 65.63%

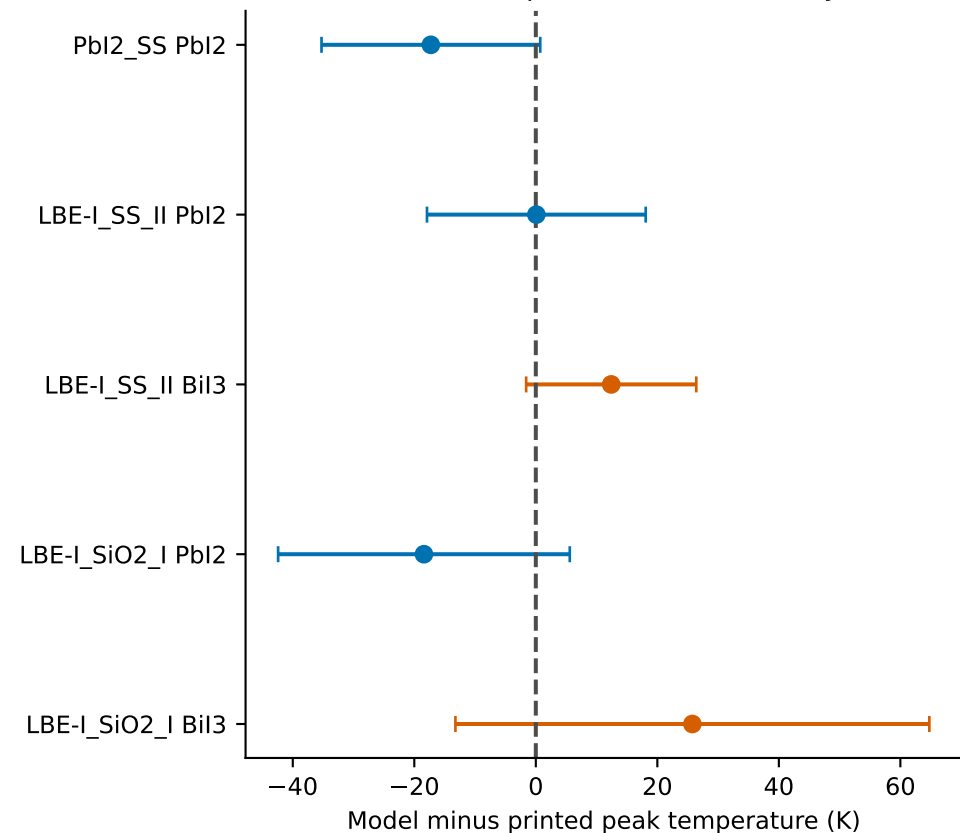

LBE-I_SiO2_I

Published iodide-only Bil3 share: 29.03%

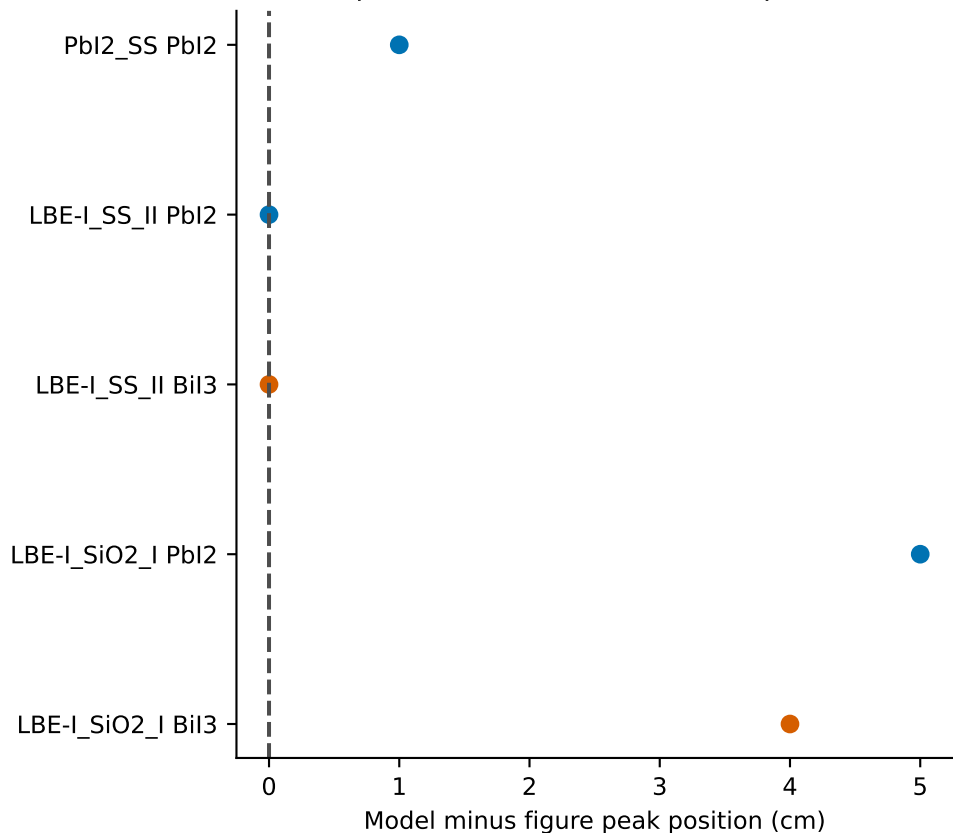

Q1 peak comparisons: source split/rate prescribed, no fit

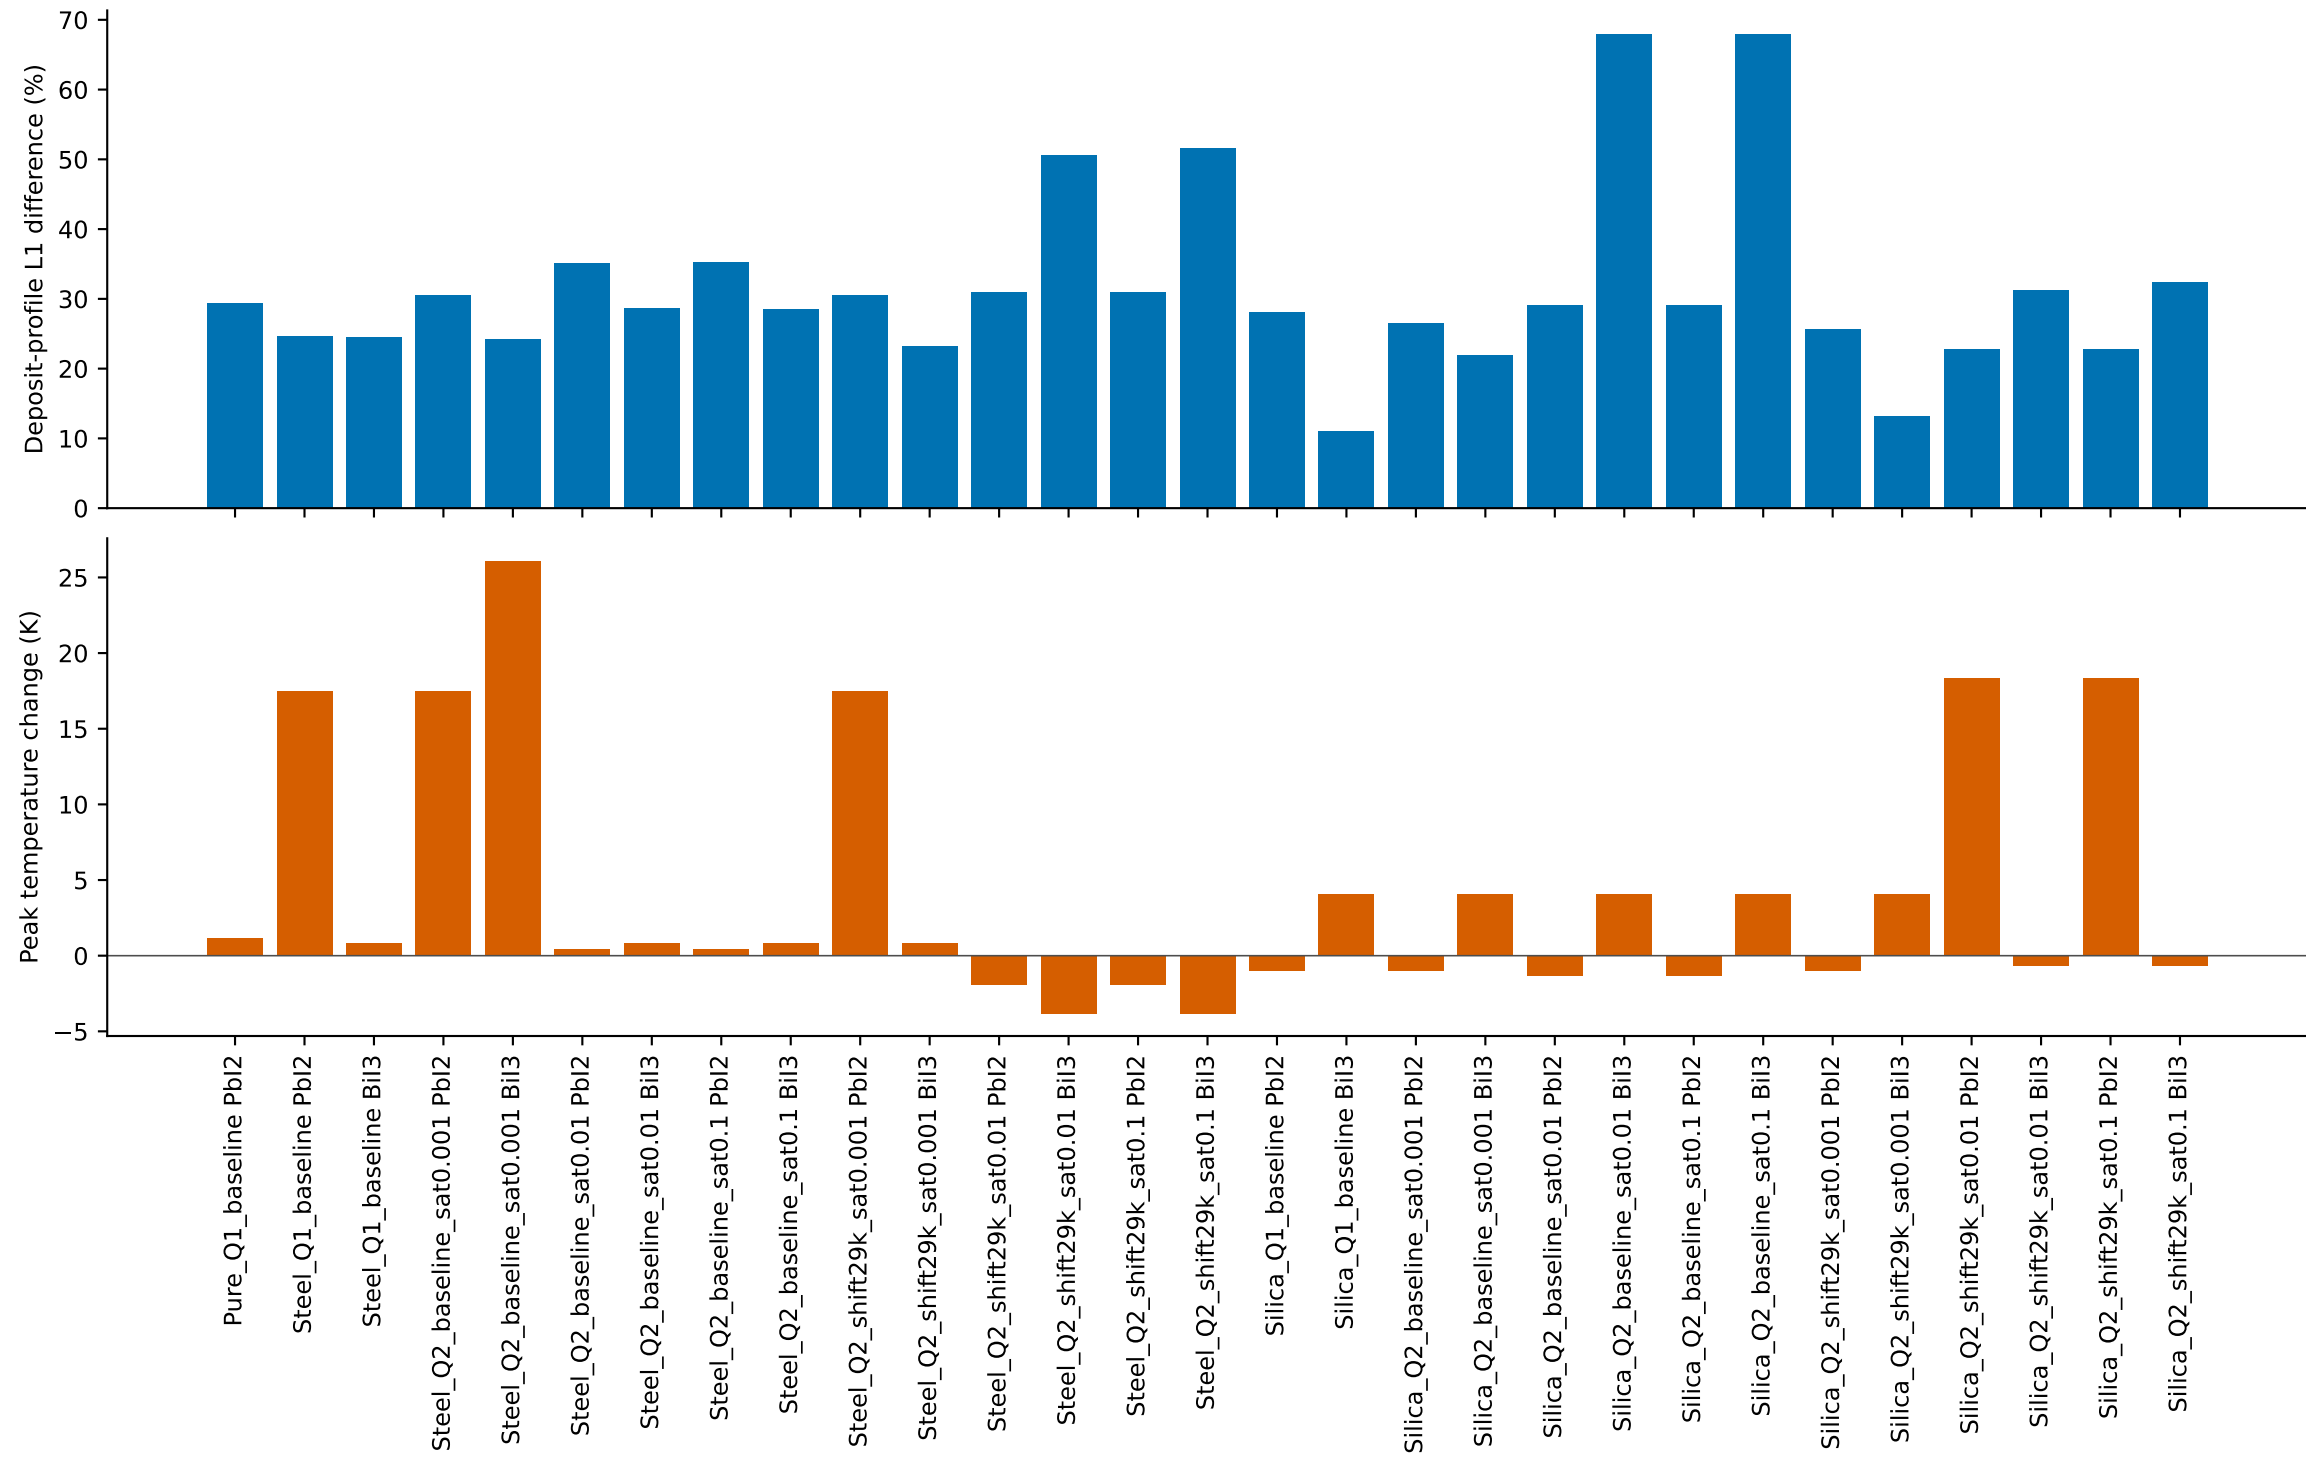

Bars show published uncertainty

A temperature match can hide a spatial error

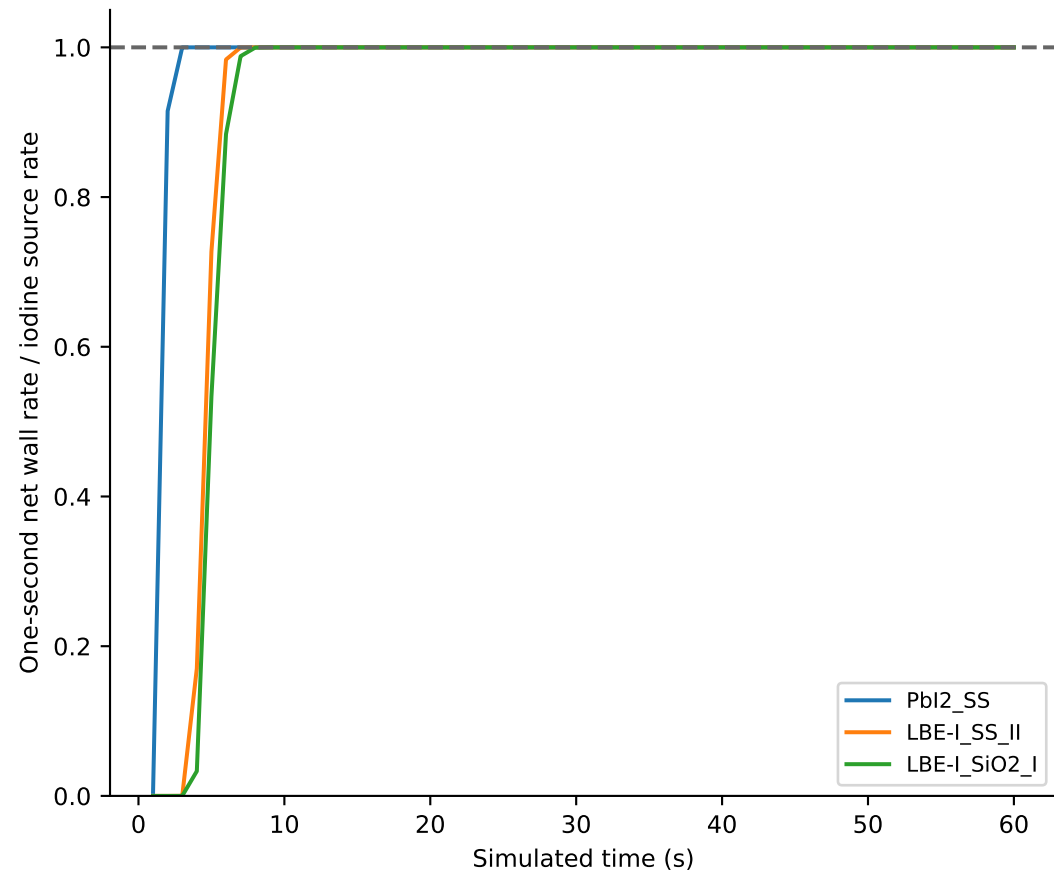

2,048 cells / 20 ms versus 18,432 cells / 2 ms
Mesh, time step and solver revision changed together: this is not an isolated convergence study

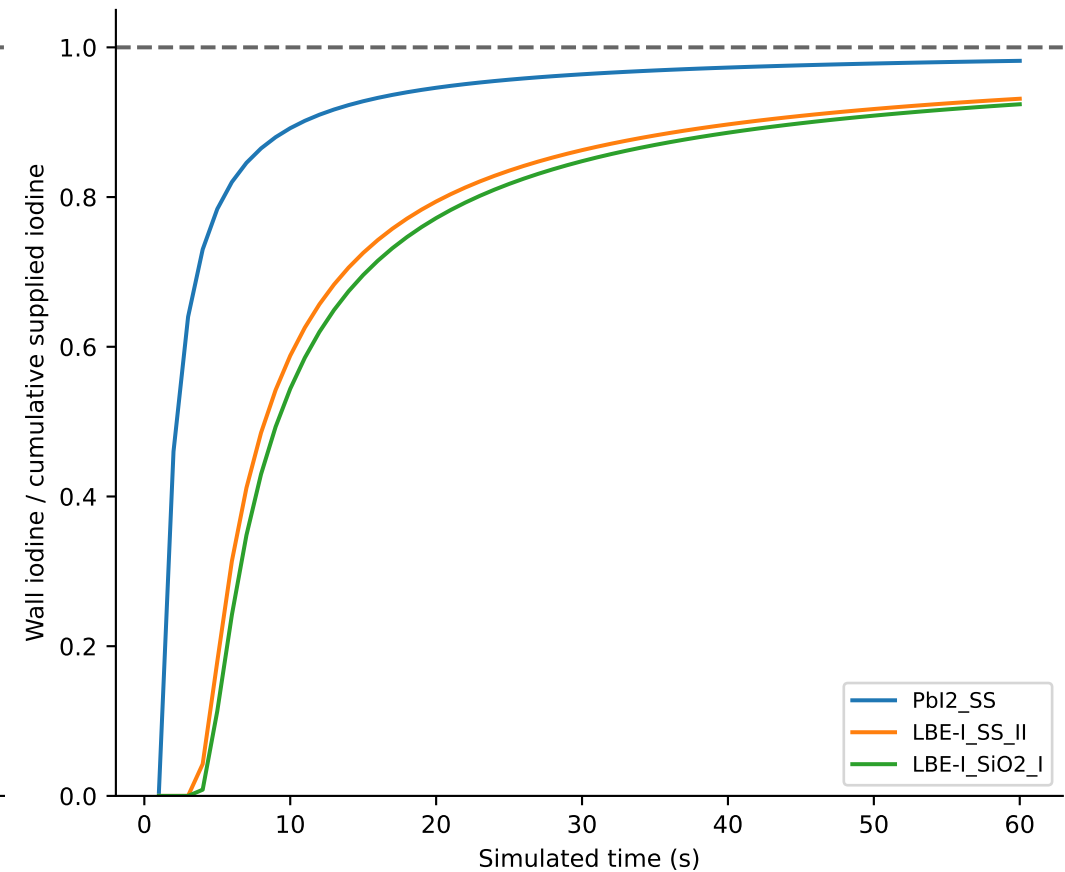

Q1 transient history; continuous release, no cooling or flush

Rate stationarity

Startup gas inventory remains at 60 s

Silica: curve and printed temperatures do not agree at measured scan peaks
